### Best Practice Platform

The Best Practice Platform of the ASSET Project is an ongoing collection of good and best practices on Science-In-Society related issues in public health research on epidemics and pandemics. An explanation of what best practices are may be found in [this article](#).

#### Country

- Any -BulgariaEurope WHO RegionFranceItalyNew ZealandNorwayRomaniaUnited States

### Best Practices Guidelines

Based on the collection of best practices on this platform, ASSET experts prepared a document outlining the guidelines of civil society involvement in public health projects.

#### Target:

## **Vaksinko: an informational campaign about vaccines in Bulgaria**

Bulgaria has a long immunization experience. Immunizations against tuberculosis, polio, diphtheria, pertussis, tetanus, measles, mumps, rubella, and hepatitis B have been mandatory for decades as well as recently introduced immunizations against pneumococcal diseases and Haemophilus infl.b infections too. Additionally, HPV vaccine was intensively introduced as recommended for 12-year old girls within a national vaccination campaign for prevention of HPV - caused cancers.

## **Coalition for Epidemic Preparedness Innovations (CEPI)**

Emerging infectious diseases have a potential for great harm, spreading unchecked in naïve populations, usually poorly prepared to deal with the new threat. The devastating effect of infectious diseases is most strongly felt in low income countries, where the health infrastructure and preparedness plans are at best insufficient.

Vaccines, Ebola, epidemic

## **Immuniser Lyon**

In the context of a Europe increasingly hesitant about vaccination, with dropping vaccination coverage, *Immuniser Lyon* was a French campaign aiming to re-inform the population of the greater Lyon area

in centre-east of France, of the proven benefits of vaccination and to incite people of all ages (children, adults, seniors) to be up-to-date with their vaccinations.

**Target:**

Citizens, Decision Makers, Government and Public Health, Healthcare Professionals

**Topic:**

Stakeholders, Vaccination

**Tags:**

Vaccine, best practice

## **European Immunization Week**

The fact that some vaccine preventable diseases have disappeared or are very rare following these vaccination programs can lead to parents believing there is no more need to vaccinate. Therefore, it is of huge importance that events like the European Immunization, helping maintain vaccination awareness and giving accurate and understandable information on immunization, exist. In this way, public confidence in immunization is less susceptible to be influenced by groups, websites or campaigns against vaccination. By acknowledging that every child deserves a healthy start in life, countries can use the European Immunization Week to increase awareness of the importance of immunization and to strengthen their immunization systems.

**Tags:**

Vaccine, public health, engagement

## **Health mediation in France**

Since its creation in 2000, the National Human Rights Romeurope alerted the authorities to the need to take better account of difficulties of access to care of foreign Roma people living in France. Following extensive discussions and in order to verify the relevance of these recommendations for access to rights and health, the Directorate General of Health supported in 2008-2009 an action of project engineering intended to present plans of development of mediation pilot projects.
