International Workshop on the World Wide Web and Population Health Intelligence

Friday, February 12, 2016 - 09:00

Severe pandemics due to highly transmissible viruses continue to threaten the world in the 21st century. In a tightly interconnected world, infectious disease outbreaks can adversely affect economic growth, trade, tourism, business and industry, and social stability as well as public and population health. Public health authorities and researchers now collect data from many sources, and analyze these data together to estimate the incidence and prevalence of different health conditions, as well as related risk factors.
